

# Problem Statement No.12

## Agentic AI for Personalized Course Pathways

|              |           |
|--------------|-----------|
| Project Name | LearnMate |
|--------------|-----------|

### The Challenge

Students often struggle to identify the right learning path that aligns with their interests and long-term goals due to the overwhelming number of online courses and a lack of personalized guidance.

LearnMate aims to solve this by acting as an Agentic AI coach that interacts with students, understands their interests such as Frontend Development, Cybersecurity, UI/UX Design, and other career-focused domains, assesses their current skill level, and dynamically builds a personalized course roadmap.

The roadmap adapts over time based on student progress, preferences, available study time, and long-term learning goals.

### Technology Requirement

Use of IBM Cloud Lite services / IBM Granite is mandatory.

### Expected Solution

The solution should provide an interactive AI-guided experience where students answer simple questions about their goals, skills, timeline, and preferences. Based on this information, the system should generate a structured, personalized learning roadmap with phases, milestones, projects, and progress tracking.
